Art Unit: 1771

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-15, 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Heine, U.S. Patent No. 6,146,705 in view of Hawkins et al, U.S. Patent No. 3,525,779. Heine discloses a fibrous glass mat comprising fibers having a length of 1-1.5 inches and a diameter of 14-18 microns, (see col. 2, lines 35-44) which are bonded with a formaldehyde type binder. The binder is present in an amount of 5-15% by weight. The mat can be used as a shingle and can have asphalt applied to it after formation. See col. 4, lines 1-27. Heine differs from the claimed invention because it does not disclose adding a minor amount of a urethane modifier to the binder. Hawkins teaches adding a minor amount of a polyurethane modifier to binder such as novolac resins which are a type of formaldehyde resin. See col. 3, lines 21-26. The polyurethane modifier is present in the resin in the amount of 5-40 parts urethane per 100 parts of resin. See claims. Therefore the ratio of binder resin to modifier taught by Hawkins is as much as 20:1 which is within the claimed range. Hawkins teaches that the addition of the urethane modifier promotes the adhesion of the resin with various other components. See col. 3, lines 22-23. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have added a minor amount of urethane modifier to the binder of Heine as taught by Hawkins, motivated by the expectation that

Art Unit: 1771

this would enhance the bonding of the resin with various other components and substrates.

3. Applicant's arguments have been considered but are moot in view of the new grounds of rejection.

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
